

We enable services at the EDGE ... in a framework agnostic way!

Techolution EDGE ConnectX, facilitates easy provisioning and management of applications, data pipelines and services at the EDGE in a framework agnostic way

- Works on edges of various capabilities and configurations. From Telco towers, city EDGE, gateway EDGE to controllers
- Works with various EDGE management frameworks like Anthos, ioFog, minikube, K3s, . . .
- Supports both containerized and native deployments
- Provides data pipeline with less memory footprint
- Out of the box value propositions for IoT such as readymade connectors
- Out of the box Model evaluation and deployment

**Simplify your EDGE processing-
Infuse AI & ML easily at the Edge**

Product Differentiators

- Supports deployment of both dockerized and native application
- Cloud native. It can run on-premise, any cloud
- Makes management of both processor & controller based solutions
- Compatible with various EDGE frameworks (minikube, K3s, ioFog etc). Reference implementation done with ioFog
- Configurable data pipeline to perform real-time data stream analytics at EDGE
- Configurable data acquisition firmware to capture data from industry standard protocols
- Out of the box integration with Google, Azure and AWS IoT platforms

Service Differentiators

- End to end expertise in EDGE, IoT solution development from hardware to AI/ML
- Partnerships with industry leaders across various tech stacks
- HVPD (High velocity product development) product development, customization and rollout
